Quarterly Considerations

Q4 2025

Market Themes

Non-U.S. Equities Shine in 2025

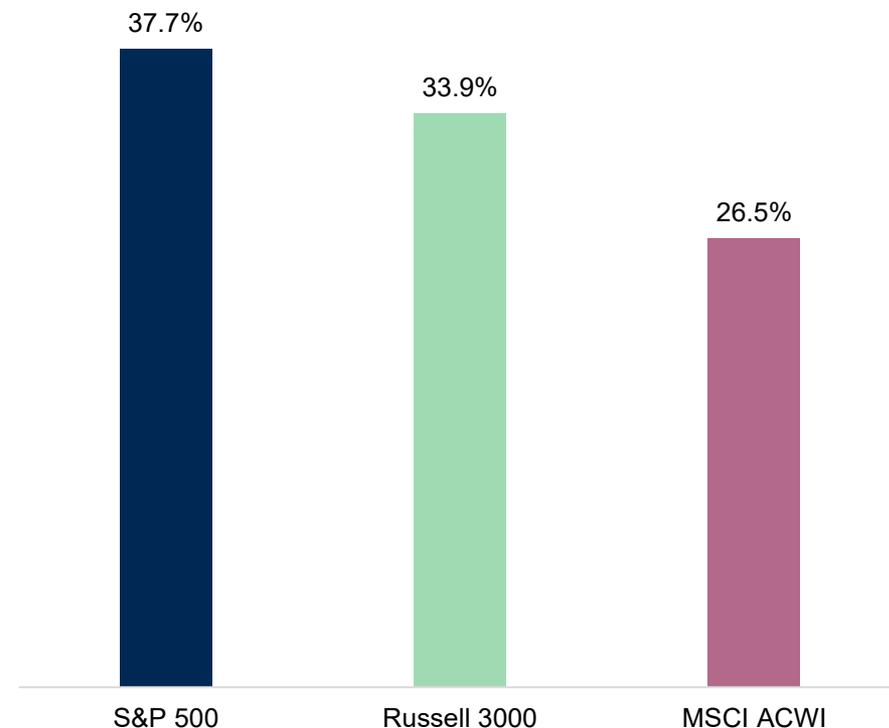

Non-U.S. equities closed out the year on a high note, outpacing domestic markets in Q4 and beating U.S. equities by the widest margin for the calendar year since 2009. A weaker U.S. dollar, more attractive valuations compared to the U.S. and a favorable corporate backdrop all helped propel non-U.S. markets ahead.

Source: FactSet. As of December 31, 2025.

“AI” Playbook - Market Exposure to “AI”

The rise of AI has been considerable in recent years and AI is poised to be an influential factor in markets in 2026. Earnings growth expectations for mid- and small-cap companies are relatively higher compared to other areas of the market, creating opportunity outside of the “Magnificent 7.” Thoughtful diversification and owning “too little” AI may be preferred over risking a severe drawdown from overexposure should AI falter.

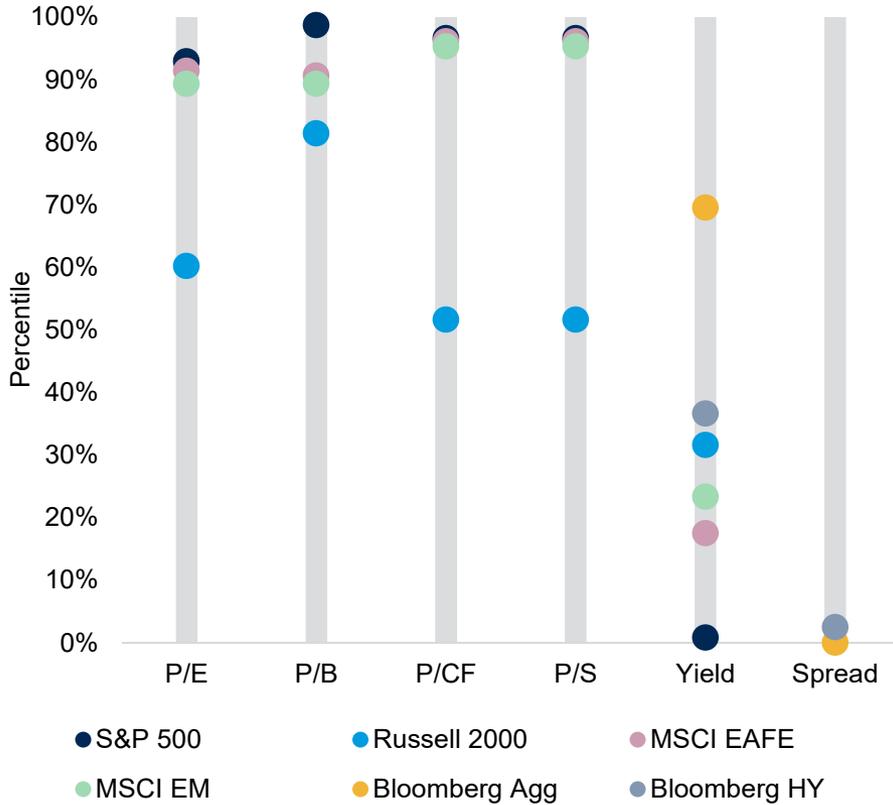

Sources: BlackRock, Morningstar, Fiduciant Advisors. As of November 30, 2025. Exposure to “AI” based on the common holdings compared to the following indexes: Morningstar Global Artificial Intelligence Select Index; NYSE Semiconductor Index; S&P Data Center, Tower REIT, and Communications Equipment Index; Morningstar Global Digital Infrastructure & Connectivity Index.

Please refer to Material Risk disclosure for important information associated with market volatility.

Market Themes

Navigating Valuation – Valuation Rank (Last 20 Years)

Valuations look full relative to history across asset classes and investors should evaluate risk tolerances appropriately. Pockets of opportunity exist. Fixed income looks attractive both on an absolute basis and relative to public equities. Where appropriate, investors may consider marketable alternative strategies that may help reduce downside risk in a narrow and fully valued market.

Source: FactSet. As of December 31, 2025. Yield is Dividend yield for equity indexes and yield to worst for fixed income. Rank is based on last 20 years, monthly data.

Noise Resistance – BB Weight in Corp High Yield Index

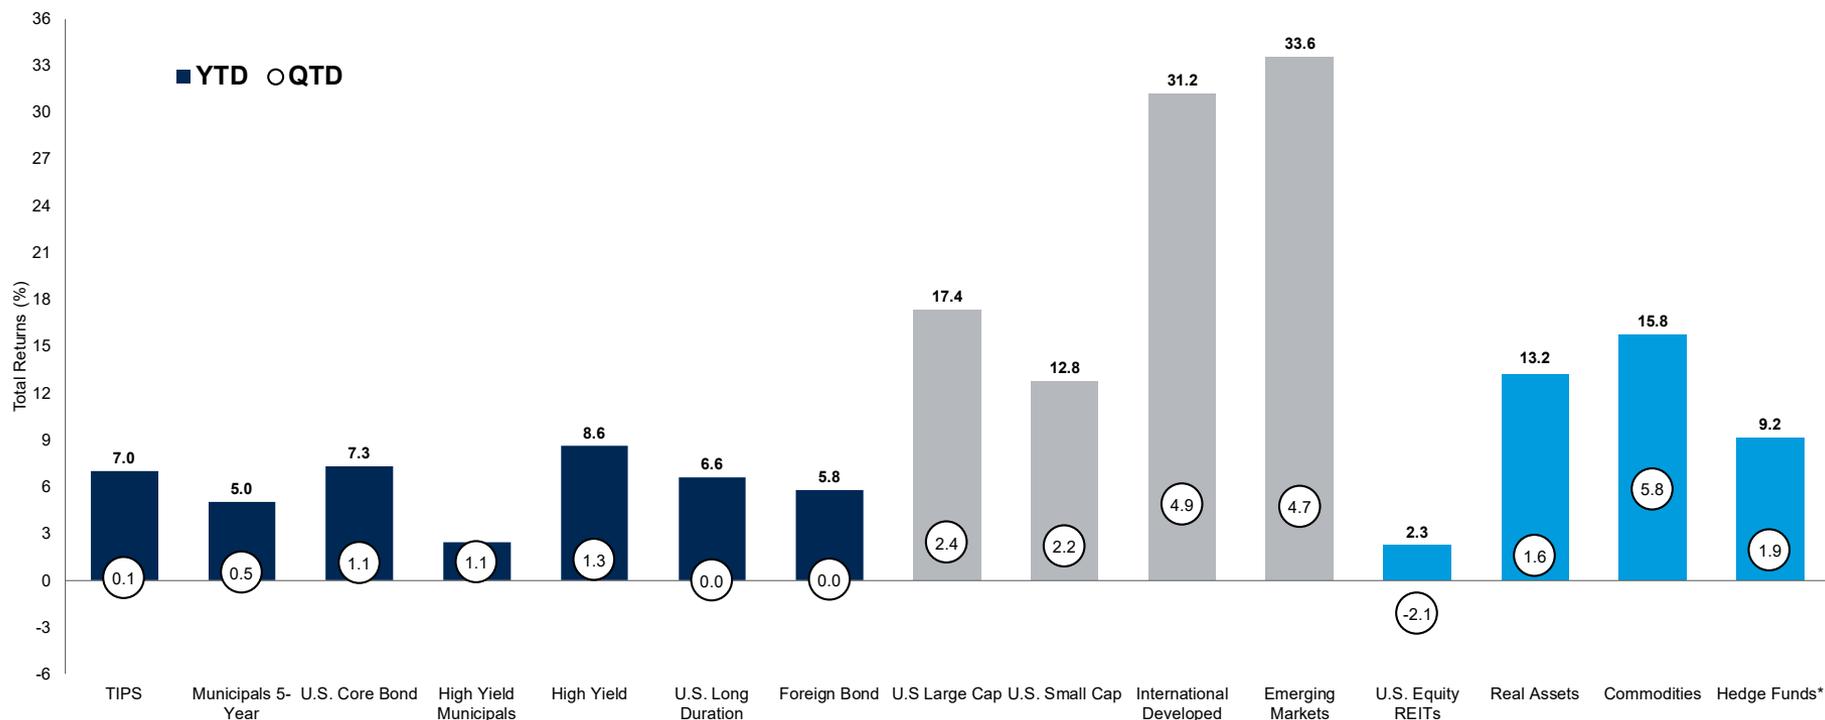

Credit was a standout in 2025 as high yield bonds returned over 8% during the year. While spreads hover near 20-year lows, strong corporate fundamentals and an increase in the credit quality of the index broadly temper concern. This lower cost of lending bodes well for economic expansion, but we continue to exercise caution given current valuations.

Asset Class Returns

Source: Morningstar Direct. As of December 31, 2025. *Hedge fund returns as of November 30, 2025.

Fixed Income (4Q 2025)

- + Interest rates were volatile during the quarter as the Federal Reserve cut interest rates twice even as inflation remained sticky. Core bonds delivered a positive return during the period.
- + The corporate bond market, particularly high yield, produced a positive return in the quarter and strong gains for the year. All-in yields remain attractive and corporate fundamentals remain supportive of the asset class.
- +/- Favorable economic data pushed longer dated yields higher in the quarter. Long duration bonds were flat.

Equity (4Q 2025)

- + Favorable earnings, a Fed rate cut, and positive economic data helped support equity markets during the quarter. Large cap modestly edged out small cap as the outlook for further rate cuts in 2026 diminished.
- + Non-U.S. markets outpaced domestic and developed edged out emerging. Europe experienced favorable returns as the outlook for economic growth improved and corporate earnings were favorable.
- + Emerging markets rounded out a banner year with a strong quarter. AI-related strength in select semiconductor companies were among top contributors.

Real Asset / Alternatives (4Q 2025)

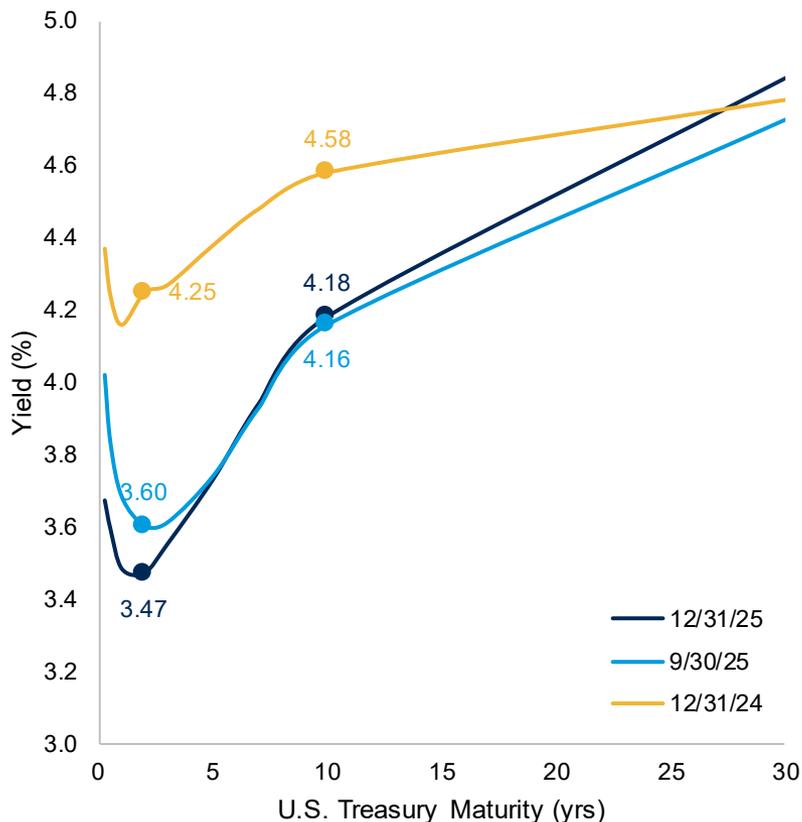

- Equity REITs struggled during the quarter despite strength in the broader equity market. The interest rate sensitive asset class was negatively impacted from rising long-term rates.
- + Commodities were positive overall but experienced mixed underlying returns as precious metals closed out a strong year while energy-related commodities declined.
- + Hedge funds were modestly positive for the period ending in November and have outpaced fixed income markets so far in 2025.

See disclosures for list of indices representing each asset class. Past performance does not indicate future performance and there is a possibility of a loss. Indices cannot be invested in directly. Please refer to Material Risk disclosure for important information associated with market volatility.

Fixed Income Market Update

U.S. Treasury Yield Curve

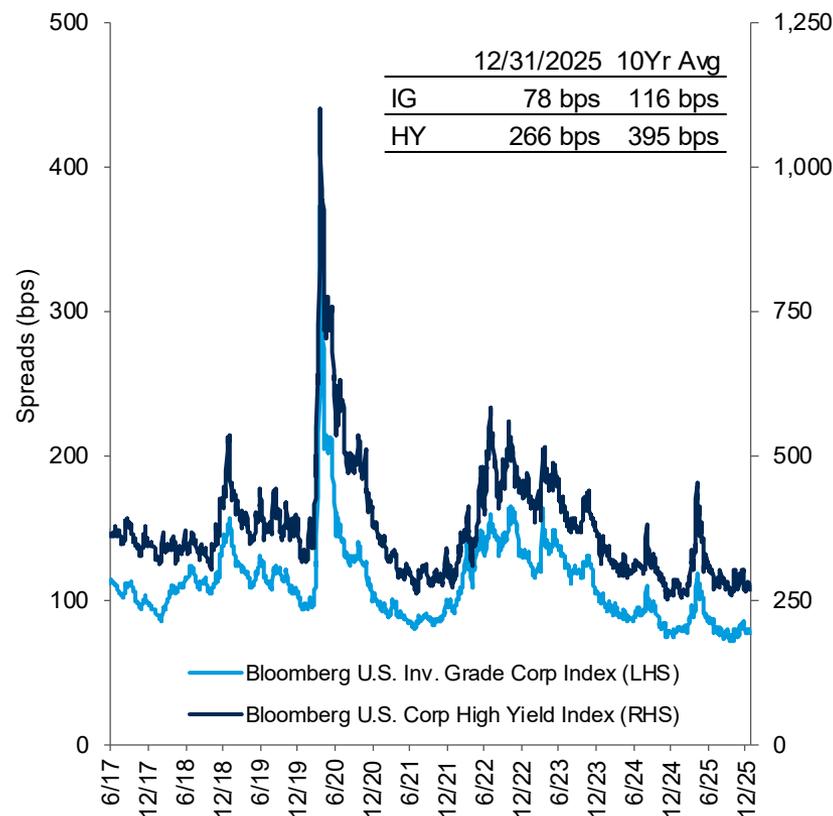

Interest rates were volatile during the quarter and the U.S. yield curve steepened. The Federal Reserve cut interest rates twice over labor market concerns, pushing front-end yields lower. However, better than expected economic data and the market's more positive outlook on the economy moved long-end yields higher.

Source: FactSet. As of December 31, 2025.

Corporate Credit Spreads – Trailing 5 Years

Credit spreads were volatile during the period, widening early in the quarter before trending back closer to where they started. Strong corporate fundamentals, a favorable technical backdrop and increased credit quality have pushed spreads to near 10-year lows, and we remain mindful of elevated valuations within the high yield asset class.

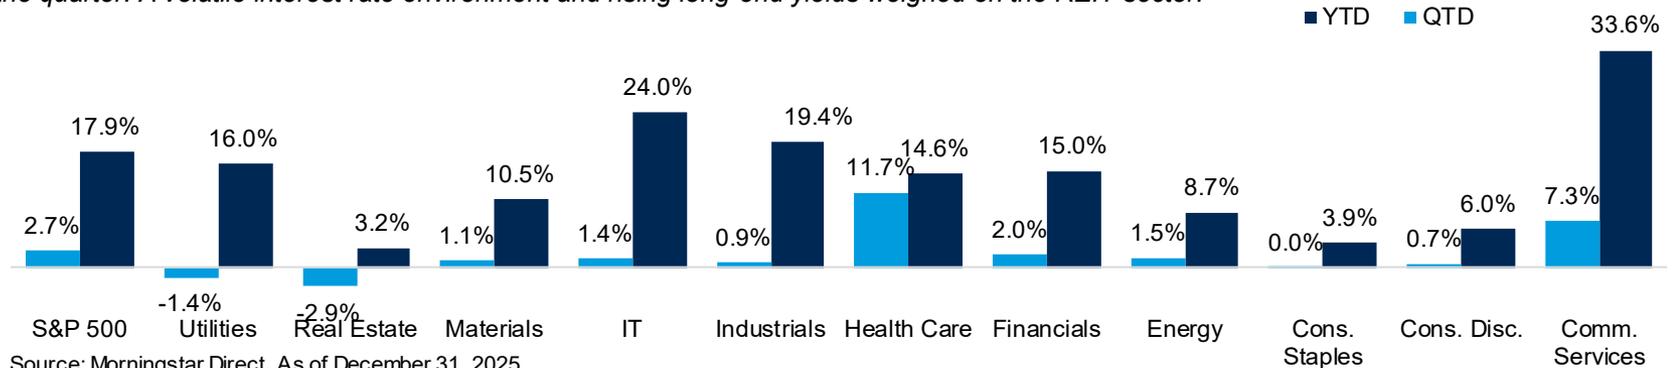

Source: FactSet. As of December 31, 2025.

Equity Market Update

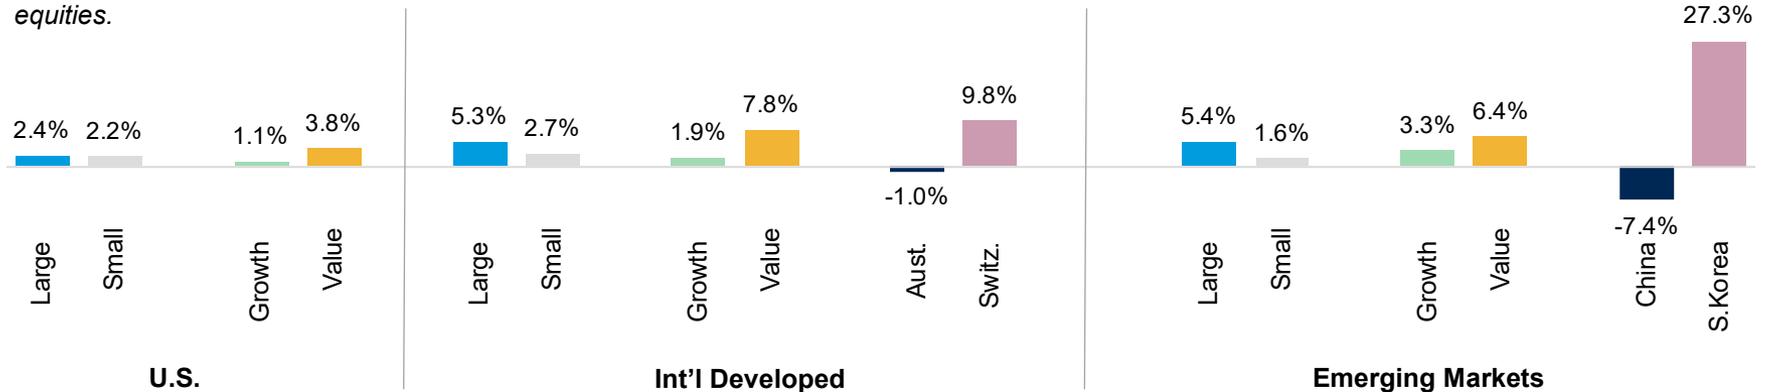

U.S. Equities – Returns by Sector (4Q 2025)

The S&P had a favorable quarter as investors digested the government shutdown and subsequent data delays, two Federal Reserve rate cuts and relatively strong corporate earnings reports. Underlying sector performance was mixed. Health care was a standout sector during the quarter. Positive news on expanded GLP-1 access and tariff exemptions helped companies such as Eli Lilly, which was one of the top contributors to the S&P during the quarter. A volatile interest rate environment and rising long-end yields weighed on the REIT sector.

Market Capitalization, Style, and Select Country Performance (4Q 2025)

Equity markets were broadly positive across regions during the quarter, with non-U.S. markets generally outpacing domestic markets. From a style perspective, value stocks outperformed their growth counterparts during the quarter. Emerging markets was once again the standout among its peers. AI optimism helped drive semiconductor companies higher in South Korea and Taiwan, but weaker economic data was a headwind for Chinese equities.

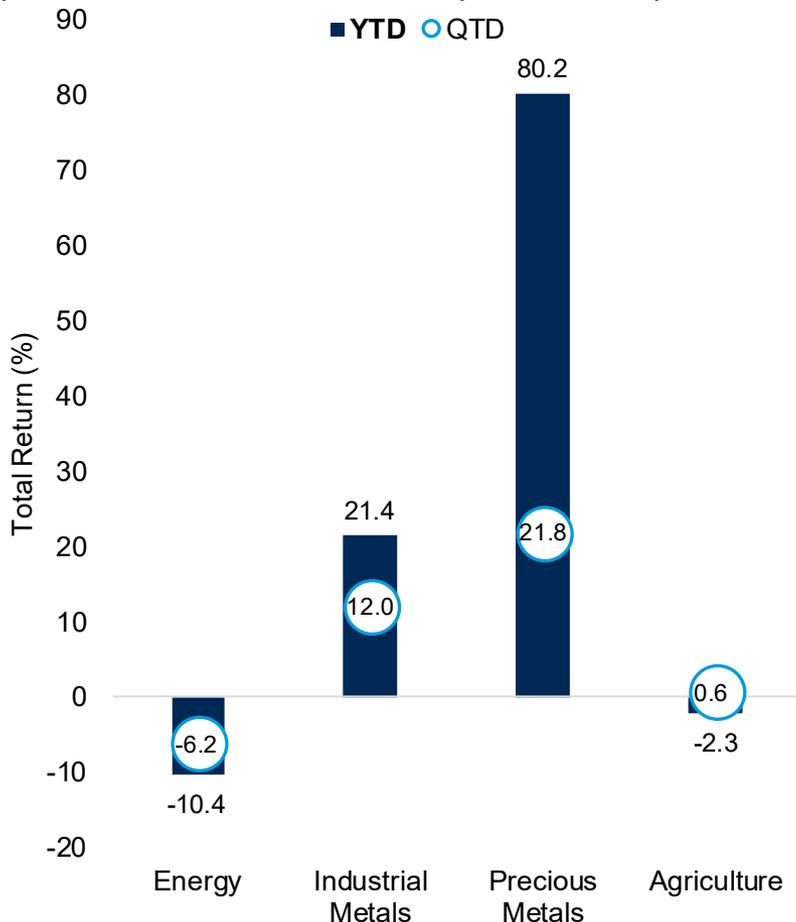

See disclosures for list of indices representing each asset class. Past performance does not indicate future performance and there is a possibility of a loss. Indices cannot be invested in directly. Please refer to Material Risk disclosure for important information associated with market volatility.

Real Assets Market Update

Commodity Performance (4Q 2025)

It was a strong quarter for commodities, driven by precious and industrial metals. Gold had a banner year, touching multiple all-time highs as investors digested uncertainty surrounding trade policy, inflation, and economic data throughout the year. Precious metals had its best calendar year of the last 30 years.

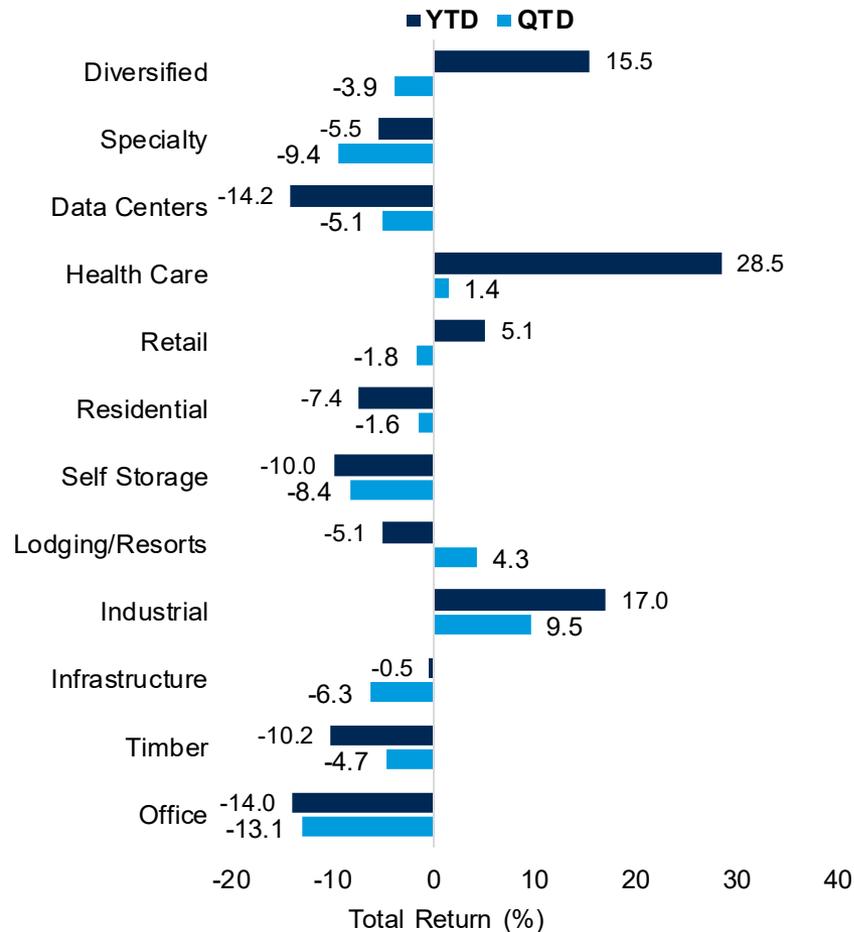

Source: Morningstar Direct. As of December 31, 2025.

See disclosures for list of indices representing each asset class. Past performance does not indicate future performance and there is a possibility of a loss. Indices cannot be invested in directly. Please refer to Material Risk disclosure for important information associated with market volatility.

REIT Sector Performance (4Q 2025)

Rising long-term yields negatively impacted REITs in the fourth quarter and the space lagged the broader equity market. Office struggled as the hybrid work environment continues to create uncertainty for the space. Industrial-related REITs were among the few positive areas in the quarter.

Material Risks & Limitations

Fixed Income securities are subject to interest rate risks, the risk of default and liquidity risk. U.S. investors exposed to non-U.S. fixed income may also be subject to currency risk and fluctuations.

Cash may be subject to the loss of principal and over longer period of time may lose purchasing power due to inflation.

Domestic Equity can be volatile. The rise or fall in prices take place for a number of reasons including, but not limited to changes to underlying company conditions, sector or industry factors, or other macro events. These may happen quickly and unpredictably.

International Equity can be volatile. The rise or fall in prices take place for a number of reasons including, but not limited to changes to underlying company conditions, sector or industry impacts, or other macro events. These may happen quickly and unpredictably. International equity allocations may also be impacted by currency and/or country specific risks which may result in lower liquidity in some markets.

Real Assets can be volatile and may include asset segments that may have greater volatility than investment in traditional equity securities. Such volatility could be influenced by a myriad of factors including, but not limited to overall market volatility, changes in interest rates, political and regulatory developments, or other exogenous events like weather or natural disaster.

Private Equity involves higher risk and is suitable only for sophisticated investors. Along with traditional equity market risks, private equity investments are also subject to higher fees, lower liquidity and the potential for leverage that may amplify volatility and/or the potential loss of capital.

Private Credit involves higher risk and is suitable only for sophisticated investors. These assets are subject to interest rate risks, the risk of default and limited liquidity. U.S. investors exposed to non-U.S. private credit may also be subject to currency risk and fluctuations.

Private Real Estate involves higher risk and is suitable only for sophisticated investors. Real estate assets can be volatile and may include unique risks to the asset class like leverage and/or industry, sector or geographical concentration. Declines in real estate value may take place for a number of reasons including, but are not limited to economic conditions, change in condition of the underlying property or defaults by the borrower.

Marketable Alternatives involves higher risk and is suitable only for sophisticated investors. Along with traditional market risks, marketable alternatives are also subject to higher fees, lower liquidity and the potential for leverage that may amplify volatility or the potential for loss of capital. Additionally, short selling involved certain risks including, but not limited to additional costs, and the potential for unlimited loss on certain short sale positions.

All investing involves risk including the potential loss of principal. Market volatility may significantly impact the value of your investments. Recent tariff announcements may add to this volatility, creating additional economic uncertainty and potentially affecting the value of certain investments. Tariffs can impact various sectors differently, leading to changes in market dynamics and investment performance. You should consider these factors when making investment decisions. We recommend consulting with a qualified financial adviser to understand how these risks may affect your portfolio and to develop a strategy that aligns with your financial goals and risk tolerance.

Disclosures – Index & Benchmark Definitions

Index & Benchmark Definitions

Fixed Income

- **Bloomberg 1-3 Month U.S. Treasury Bill Index** is designed to measure the performance of public obligations of the U.S. Treasury that have a remaining maturity of greater than or equal to 1 month and less than 3 months.
- **Bloomberg U.S. Aggregate Index** covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities.
- **Bloomberg Global Aggregate ex. USD Indices** represent a broad-based measure of the global investment-grade fixed income markets. The two major components of this index are the Pan-European Aggregate and the Asian-Pacific Aggregate Indices. The index also includes Eurodollar and Euro-Yen corporate bonds and Canadian government, agency and corporate securities.
- **Bloomberg U.S. Corporate High Yield Index** covers the universe of fixed rate, non-investment grade debt. Eurobonds and debt issues from countries designated as emerging markets (sovereign rating of Baa1/BBB+/BBB+ and below using the middle of Moody's, S&P, and Fitch) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMG countries are included.
- **Bloomberg US Government/Credit 1-3 Year Index** is the 1-3 year component of the U.S. Government/Credit Index, which includes securities in the Government and Credit Indices. The Government Index includes treasuries and agencies, while the credit index includes publicly issued U.S. corporate and foreign debentures and secured notes that meet specified maturity, liquidity, and quality requirements.
- **Bloomberg US Government/Credit Long Index** is the Long component of the U.S. Government/Credit Index, which includes securities in the Government and Credit Indices. The Government Index includes treasuries and agencies, while the credit index includes publicly issued U.S. corporate and foreign debentures and secured notes that meet specified maturity, liquidity and quality requirements.
- **Bloomberg US Treasury Inflation Protected Securities Index** consists of Inflation-Protection securities issued by the U.S. Treasury.
- **Bloomberg Muni Index** is a rules-based, market-value-weighted index engineered for the long-term tax-exempt bond market. Bonds must be rated investment-grade by at least two ratings agencies.
- **Bloomberg High Yield Municipal Bond Index** covers the universe of fixed rate, non-investment grade debt.
- **Bloomberg Intermediate U.S. Gov't/Credit** is the Intermediate component of the U.S. Government/Credit index, which includes securities in the Government and Credit Indices. The Government Index includes treasuries and agencies, while the credit index includes publicly issued U.S. corporate and foreign debentures and secured notes that meet specified maturity, liquidity, and quality requirements.
- **JPMorgan GBI-EM Global Diversified** tracks the performance of local currency debt issued by emerging market governments, whose debt is accessible by most of the international investor base.

Equity

- **U.S. Dollar Index** measures the value of the dollar relative to a basket of U.S. trade partners' currencies. It is a weighted geometric mean of the dollar's value relative to other currencies.

Additional Information

- Equity sector returns are calculated by S&P, Russell, and MSCI for domestic and international markets, respectively. S&P and MSCI sector definitions correspond to the GICS® classification (Global Industry Classification System); Russell uses its own sector and industry classifications.
- MSCI country indices are free float-adjusted market capitalization indices that are designed to measure equity market performance of approximately 85% of the market capitalization in each specific country.
- Currency returns are calculated using FactSet's historical spot rates and are calculated using the U.S. dollar as the base currency.
