# **Quarterly Considerations**

Q4 2024

01
Fragility

Valuation, concentration and inflation have sowed the seeds for potential volatility

02

Durability

Intentionality is key and durability is available at modest "cost" in markets today 03

Age of Alpha

Active management and alternatives have the potential to enhance portfolio resilience

#### The Impact from Concentration

As market concentration has grown, so have the risks associated with it. If the top-10 stocks experience a flat return and the remainder of constituents achieve a more typical long-term return of 7%, the overall index would return less than 5%. The "law of large numbers" comes into play as the mega cap companies try to maintain growth metrics to support price and valuations but, if history rhymes, many may find it hard to sustain these levels in the future.

		Flat Top 10	Top 10	Top 5	Тор 3
	Top X Return	0%	-13%	-19%	-28%
	Remainder Return	7% <b>4.5%</b>	7% <b>0.00%</b>	7% 0.00%	7% 0.00%
Name	Weight (%)	11070	1 0.0070	0.0070	0.0070
NVIDIA CORP	7.2%	0%	-13%	-19%	-28%
APPLE INC	6.7%	0%	-13%	-19%	-28%
MICROSOFT CORP	6.2%	0%	-13%	-19%	-28%

REMAINING CONSTITUENTS	60.9%	7%	7%	7%	7%

For illustrative purposes only. Source: FactSet as of October 31, 2024.

#### Can the Party Keep Going?

Large-cap U.S. equities had another banner year as the S&P 500 returned over 25%. Valuation and concentration have increased within the index as the "Mag 7" accounted for over 50% of the Index's return in 2024<sup>1</sup>. Historically it has been extremely difficult for companies to sustain high levels of growth for consecutive years and a reversion of these darling stocks may lead to higher volatility and offer opportunities in other areas of the market.

# Share of Individual S&P 500 Companies with Sustained High Sales Growth (1985-Present)

Sources: Goldman Sachs as of October 18. 2024.

1) Morningstar as of December 31, 2024.

#### **Market Themes**

#### **Stubborn Inflation and Potential for Reignition?**

Substantial progress has been made on the inflation front, but levels remain stubbornly above the Fed's 2% target, now sitting at 2.7%<sup>1</sup>. Technological and productivity advancements help price stability, but a host of other factors are increasing the risks of inflation potentially reigniting. Shifting expectations away from an easing Fed or moderating inflation may impact price and volatility and warrants monitoring.

## **Inflationary**

- Deglobalization/ onshoring
- Political factors (e.g., potential tariffs, immigration policy, etc.)
- Growing deficits
- Money supply
- Decarbonization

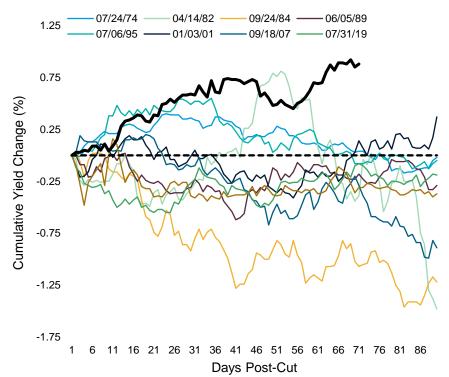

# **Disinflationary**

- Slowing population growth
- Technology
- Al productivity enhancement

#### Rates Cut, Markets Split

After the Fed's first rate cut of the year, the 10-year U.S. Treasury yield soared by over 75 basis points—a rare event not seen since 1982. This unexpected reaction could indicate resistance from the bond market, fueled by increased concerns of more persistent inflation and uncertainty around the impact of potential policy changes regarding tariffs and immigration, high deficits, and deglobalization.

#### **Cumulative Change of 10-Year U.S. Treasury Yield 90 Trading Days After First Fed Cut**

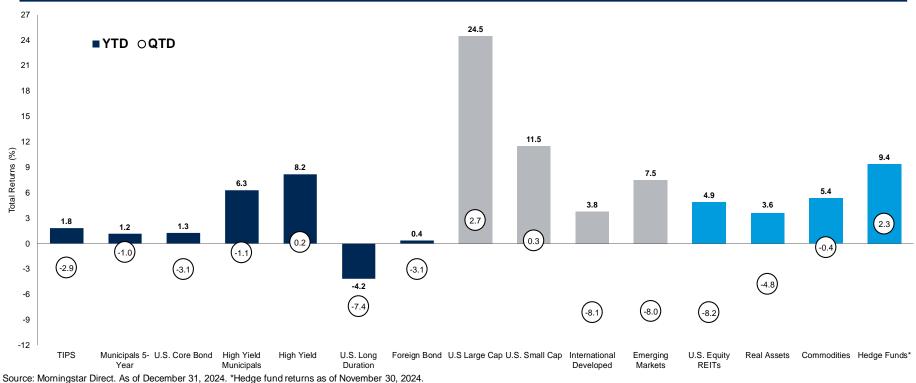

Source: FactSet. As of December 31, 2024.

<sup>1)</sup> FactSet, Bureau of Labor Statistics. As of November 30, 2024.

### **Asset Class Returns**

#### Fixed Income (4Q 2024)

- Fixed income markets broadly struggled, even as the Federal Reserve cut its target rate by another 50 bps during the quarter. A resilient economy and concerns surrounding persistent inflation pushed interest rates higher.
- + High yield eked out a modest gain in the quarter and was a standout for the year. Spreads compressed modestly in the quarter as fundamentals remain solid and the asset class continues to have strong demand.
- Long duration assets struggled with the move higher in rates.

#### Equity (4Q 2024)

- + U.S. equities ended the year with modest positive returns in the fourth quarter despite elevated volatility. Mega cap names concentrated at the top of the market continue to dominate the asset class.
- International developed markets took a large step back in the guarter amid signs of economic weakness, geopolitical uncertainty and concerns over potential tariffs by the upcoming administration in Washington.
- Emerging markets struggled as well in the face of potential tariffs from the U.S. and weaker currencies.

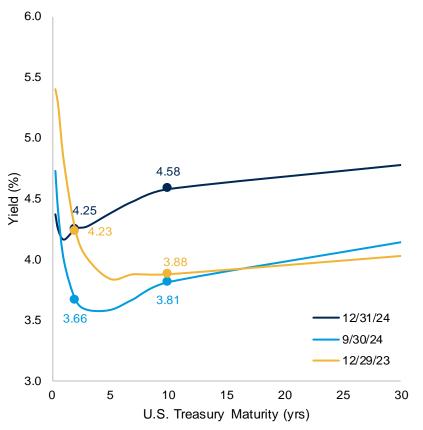

#### Real Asset / Alternatives (4Q 2024)

- Rising interest rates were a large headwind for REITs in the fourth quarter.
- Rising energy prices were not enough to offset weakness in metals and agriculture and commodities were modestly negative in the quarter.
- + Hedge funds (reported as of November) had a strong two months to start the quarter. Heightened market volatility provided a boost to the space, offering favorable trading opportunities throughout the period.

# **Fixed Income Market Update**

#### **U.S. Treasury Yield Curve**

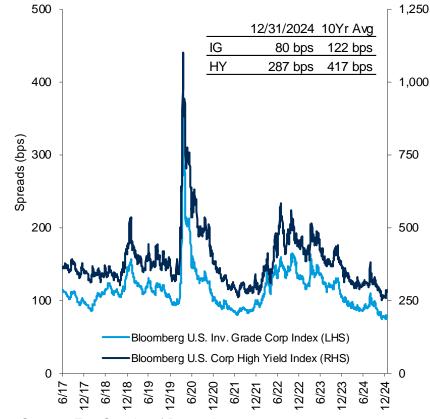

Interest rates climbed even as the Fed slashed its target rate by another 50 basis points during the quarter. Concerns about persistent inflation and uncertainty surrounding future fiscal policy have kept market tensions elevated.

Source: FactSet. As of December 31, 2024.

#### Corporate Credit Spreads - Trailing 5 Years

Overall risk-off posture in fixed income markets was a headwind for returns in corporate credit. However, the high yield asset class was an outperformer during the quarter, as credit spreads tightened slightly. Spreads continue to remain well below long-term averages reflecting strong fundamentals.

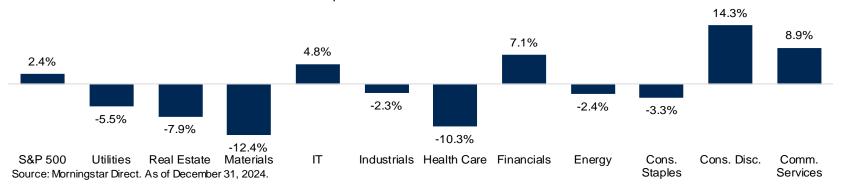

Source: FactSet. As of December 31, 2024.

# **Equity Market Update**

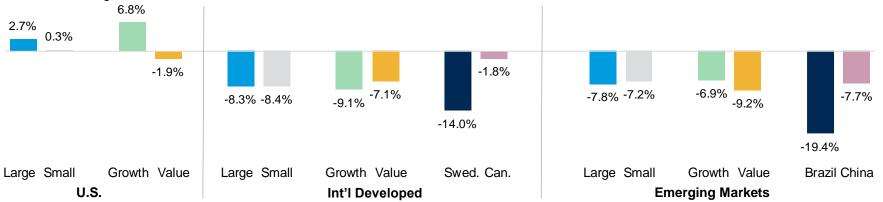

#### U.S. Equities – Returns by Sector (4Q 2024)

U.S. equities were modestly positive in the quarter, rounding out a strong year for U.S. large-cap stocks. The S&P 500 finished back-to-back years above 20% for the first time since 1998. Despite a positive overall return for the index for in the quarter, most underlying sectors were negative, with the concentration of select tech, consumer and communications stocks driving results. Valuations within the U.S. remain elevated both on an absolute basis and relative to other areas such as international equities.

#### Market Capitalization, Style, and Select Country Performance (4Q 2024)

There was a large disparity between domestic equities and non-U.S. equities during the fourth quarter. A stronger economic backdrop helped drive U.S. markets. However, worries on the impact of potential tariffs that the upcoming administration has been discussing coupled with weaker economic data abroad weighed on investor confidence for non-U.S. markets.

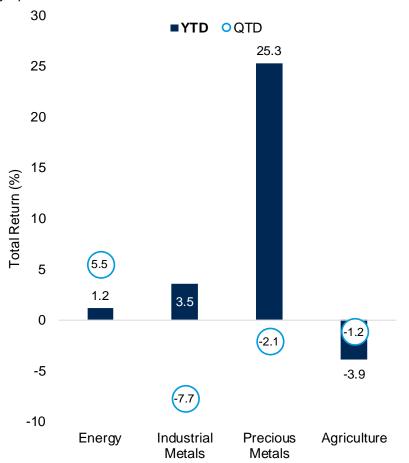

Source: Morningstar Direct. As of December 31, 2024.

# **Real Assets Market Update**

#### **Commodity Performance (4Q 2024)**

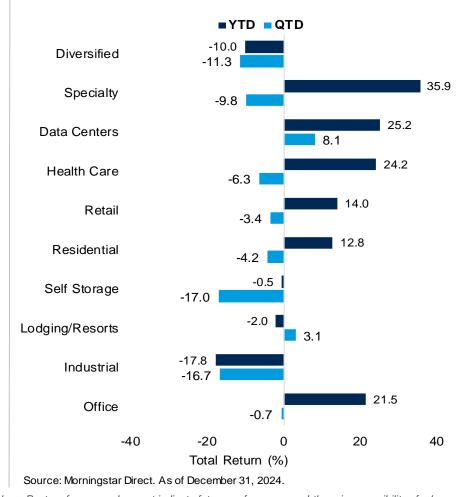

Commodities were modestly negative during the fourth quarter, with mixed results from underlying sub-sectors. Energy was the leader as oil prices moved higher on concerns over tighter supply due to escalating geopolitical tensions.

Source: Morningstar Direct. As of December 31, 2024.

#### **REIT Sector Performance (4Q 2024)**

REITs struggled in the rising interest rate environment this quarter. Data Centers continued to outperform on continued demand for data storage. Meanwhile, Industrial and Self Storage underperformed on slowing manufacturing and post-pandemic occupancy, respectively.

See disclosures for list of indices representing each asset class. Past performance does not indicate future performance and there is a possibility of a loss. Indices cannot be invested in directly.

### **Material Risks & Limitations**

**Fixed Income** securities are subject to interest rate risks, the risk of default and liquidity risk. U.S. investors exposed to non-U.S. fixed income may also be subject to currency risk and fluctuations.

Cash may be subject to the loss of principal and over longer period of time may lose purchasing power due to inflation.

**Domestic Equity** can be volatile. The rise or fall in prices take place for a number of reasons including, but not limited to changes to underlying company conditions, sector or industry factors, or other macro events. These may happen quickly and unpredictably.

International Equity can be volatile. The rise or fall in prices take place for a number of reasons including, but not limited to changes to underlying company conditions, sector or industry impacts, or other macro events. These may happen quickly and unpredictably. International equity allocations may also be impact by currency and/or country specific risks which may result in lower liquidity in some markets.

Real Assets can be volatile and may include asset segments that may have greater volatility than investment in traditional equity securities. Such volatility could be influenced by a myriad of factors including, but not limited to overall market volatility, changes in interest rates, political and regulatory developments, or other exogenous events like weather or natural disaster.

**Private Equity** involves higher risk and is suitable only for sophisticated investors. Along with traditional equity market risks, private equity investments are also subject to higher fees, lower liquidity and the potential for leverage that may amplify volatility and/or the potential loss of capital.

**Private Credit** involves higher risk and is suitable only for sophisticated investors. These assets are subject to interest rate risks, the risk of default and limited liquidity. U.S. investors exposed to non-U.S. private credit may also be subject to currency risk and fluctuations.

**Private Real Estate** involves higher risk and is suitable only for sophisticated investors. Real estate assets can be volatile and may include unique risks to the asset class like leverage and/or industry, sector or geographical concentration. Declines in real estate value may take place for a number of reasons including, but are not limited to economic conditions, change in condition of the underlying property or defaults by the borrow.

**Marketable Alternatives** involves higher risk and is suitable only for sophisticated investors. Along with traditional market risks, marketable alternatives are also subject to higher fees, lower liquidity and the potential for leverage that may amplify volatility or the potential for loss of capital. Additionally, short selling involved certain risks including, but not limited to additional costs, and the potential for unlimited loss on certain short sale positions.

## **Disclosures – Index & Benchmark Definitions**

#### **Index & Benchmark Definitions**

#### Fixed Income

- Bloomberg 1-3 Month U.S. Treasury Bill Index is designed to measure the performance of public obligations of the U.S. Treasury that have a remaining maturity of greater than or equal to 1 month and less than 3 months.
- Bloomberg U.S. Aggregate Index covers the U.S. investment grade fixed rate bond
  market, with index components for government and corporate securities, mortgage passthrough securities, and asset-backed securities.
- Bloomberg Global Aggregate ex. USD Indices represent a broad-based measure of the global investment-grade fixed income markets. The two major components of this index are the Pan-European Aggregate and the Asian-Pacific Aggregate Indices. The index also includes Eurodollar and Euro-Yen corporate bonds and Canadian government, agency and corporate securities.
- Bloomberg U.S. Corporate High Yield Index covers the universe of fixed rate, non-investment grade debt. Eurobonds and debt issues from countries designated as emerging markets (sovereign rating of Baa1/BBB+/BBB+ and below using the middle of Moody's, S&P, and Fitch) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMG countries are included.
- Bloomberg US Government/Credit 1-3 Year Index is the 1-3 year component of the U.S.
  Government/Credit Index, which includes securities in the Government and Credit Indices.
